

## Emma Watson on The Jimmy Fallon Show<sup>1</sup>

Emma Watson – British actress and activist who was perhaps best known for playing the young wizard Hermione Granger in the Harry Potter films. She also garnered attention as a spokesperson for women's equality

It's the second time Emma Watson is visiting The Tonight Show with Jimmy Fallon. **The instant** she gets on stage, her fans cheer with excitement. She's wearing a fancy dress and there's no doubt she's in a good mood tonight.

Jimmy remembers the last time Emma visited his show. That time she couldn't be nicer and sweeter. Before the interview Emma said that she admired the Halloween trick-or-treating thing that the show had been doing. **It wasn't until** Jimmy said **that** she realized having mistaken him for another Late Night Show host Jimmy Kimmel. **Subsequently**, Emma Watson explained that she died inside after that embarrassing moment and that Jimmy Fallon was so nice to her, because he kept saying that it was okay and that he got confused all the time. The fans absolutely love that hilarious story.

Next topic on the interview is Emma Watson's recent movies, especially her fantastic play in the "Beauty and the Beast (2017)" movie, which became a huge box-office success that Emma did not even expect. "Those numbers are crazy. But this means that people loved the film, which is just so awesome". She definitely put a lot of work into that movie and **shortly after** some questions she admits doing princess boot camp. "I did princess boot camp for three months. I got to ride a horse, I learned to waltz, I had singing lessons and rehearsals".

At last, Jimmy starts a conversation about Emma's new movie "The Circle", based on Dave Eggers book. The actress says that the film is about a young woman, who joins a big tech company and has moral and ethical dilemmas about the amount of personal data the company owns. She's grateful to be a part of it.
